(54) REWRITABLE ROM MOUNTED
DEVICE

(57) Abstract:

PURPOSE: To facilitate power-on operation and to improve the package density by arranging communication pads at the position of a battery arrangement part which is covered with and hidden behind a cover and supplying electric power from a communication tool through battery pieces.

CONSTITUTION: A camera body 1 is assembled up to a complete state right before the operation for adjusting the electrically rewritable ROM electrically. Then the battery lid 2 is opened and the communication tool 8 is put close to the body 1 in the inserting direction of a battery shown by an arrow A and stopped at the position where power source feed parts 7 abut on the battery pieces or where communication pins 8 abut on the communication pads 5. The position relation at this time is determined by the body part 6' of the tool 8 which is inserted into a battery chamber 3 and the wall of the battery chamber 3. Then the power source is turned on with the tool 8 and a communication is started to complete the specific adjustment of ROM data. This constitution enables data to easily be written in and read out of the ROM.
